Accounts Software Integrated ePos

ePos Software

With seamless integration between our ePos software and your accounts system, time and money can be saved by improving the way in which your staff process transactions, deal with customer queries and how your company deals with stock and pricing amendments.

KCPOS, makes all of this easy with an intuitive design and menu structure which will improve the experience for both your staff and customers.

KCPOS is a modular system which allows you to build your ePos system in a way which suits your business. This fundamental idea allows KCPOS to grow with your business from a single premises with a single till to as large as you want it to be.

eCommerce Solution

With KC eCommerce your business can automatically process transactions at any time, with no re-keying required, taking all product pricing and description information directly from your in-house accounts package. This means that whether a sale is made on your website or on your shop floor stock synchronisation is maintained and the order is input seamlessly into your accounts software.

As standard KC eCommerce is a feature rich solution and boasts a free branded website thrown in. Offering features such as trade accounts, customer specific pricing and quantity discounts, KC eCommerce stands out from the competition.

Extensive customisation to your exact needs is available should you so wish.

Remote / Mobile Solutions

With KCPOS Remote you can take your business anywhere by utilising an Ultra Mobile PC to take orders away from your normal point of sale – increasing both your potential to sell and your efficiency.

KCPOS Remote seamlessly integrates with your accounting package meaning that the amount of paperwork normally used to process orders when deliveries or remote sales are made will be reduced, and in turn this will reduce the time spent on processing paper orders into orders which are ready to be invoiced.

Maintaining the features and benefits of KCPOS, KCPOS Remote is still a robust and reliable as its parent product and will prove to be an invaluable asset to many businesses who can, or do, take orders away from their normal point of sale.

Stock Systems

KC Stock Manager gives you the ability to manage your stock processes efficiently and accurately through the use of handheld barcode scanning devices. The results of stock management can then be fed back into your stock file which in turn feeds both your accounts software and your KCPOS tills for total integration.

Your whole stock management process can be completed with KC Stock Manager as it can perform stock takes, raise purchase orders, receive goods, write off stock, perform price audits, move stock between locations, pinpoint stock bin location and print shelf edge labels.

Furthermore, with KC Stock Re-order the levels of stock your order and re-order can be intelligently calculated and predicted based on your sales from a defined period of time.

Bookings Management

KC Bookings works alongside KCPOS and can manage every aspect of your events and activities schedule.

Whether your business deals with individual or group bookings, KC Bookings allows you to manage time slots within your schedule with the ability to view, add, or change the details of bookings quickly and easily. The software also records the details of the allocated time and manages staff, facilities, rooms and equipment used.

All bookings made will automatically reserve the time in the KC Bookings diary where all details can be viewed.

Accounts / Finance Software

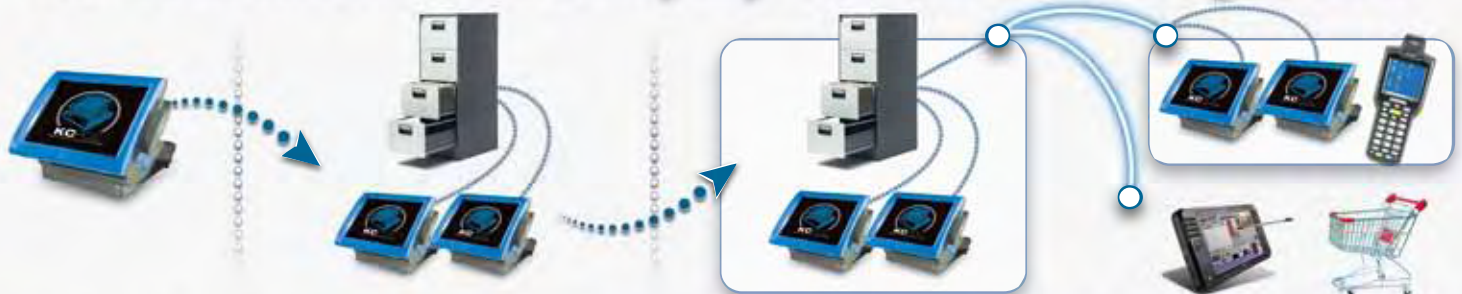

KC Back Office Accounts is a complete accounting solution designed specifically to work with KCPOS.

This system is the perfect solution for retailers as KC Back Office has no period or year-ends, and instead uses continual rolling periods with up to 52 accounting periods. This gives total flexibility and the ability to view your accounting figures on a week by week basis rather than monthly.

KC Back Office Accounts can act as a fully functioning standalone accounts system or can seamlessly integrate with your existing accounting package to boost productivity and add features. KC Back Office Accounts can also facilitate KC eCommerce by providing features and stock attributes that other accounts packages don't as standard.

KCPOS Grows With Your Company - No Matter How Large It Gets

From one site running one till, through to a multi-site company of any size, KCPOS is integral to your business.

Modular ePos To Fit Your Business Exactly
